

Company:

[Katalon](#)

Role:

Chief Technology Officer

Background

Katalon is the market leading test automation software platform with over 750,000 global users, 22,000 monthly active users and is adding approximately 2,500 users per week. As a company, Katalon has been built using a Product Led Growth (PLG) approach since being released into the market for free 4 years ago. Since releasing the paid version in October 2019, Katalon has seen rapid growth in revenue and continues to see extremely strong demand in the market. Katalon has been recognized as the Gartner Peer Insights Customer Choice Award for Test Automation for 2019 and 2020.

Katalon's vision is to become the most popular software quality platform in the world by providing indispensable testing tools for software teams of all sizes. Katalon has already made significant investments in R&D and has a roadmap and plan to build out a comprehensive platform to achieve this vision.

Katalon is founded and funded by KMS Technology, a global technology company with over 1,000 resources in Vietnam and the United States. KMS has an offshore product development business and also created two other software companies in the software testing space: QASymphony (sold to Insight Partners and merged with Tricentis(\$100M ARR)) and Kobiton (over 350 customers). Katalon has the advantage of operating as it's own company while leveraging the infrastructure and strengths of KMS.

Katalon is currently a team of 60 team members with 30 focused on product. Our goal in building Katalon is to create a global software company with it's core team in Vietnam supplemented by key resources globally.

Katalon CTO's Overview

The Chief Technology Officer (CTO) will be responsible for Katalon's technology and technological resources. S/he will shape the Katalon platform architecture and direction to ensure that the product strategy and business strategy are aligned. As a Product Led Growth company, the CTO will be a critical part of the Executive team across all aspects of the business in rapidly growing the business.

Katalon CTO Key Responsibilities

- Oversee and continue to build out the teams in the R&D and Product Development organizations (currently 30+ in Vietnam).
- Work closely with the CEO (in Northern California), who acts as the Chief Product Officer, to build a world-class platform
- Own the technology architecture and future direction for Katalon
- Collaborate with other Executives and business functions in Katalon to define and execute upon the company strategy
- Be responsible for articulating what makes Katalon unique and how Katalon's technology translates to value for the customer
- Collaborate with Sales and Marketing to be the technical voice of Katalon with customers, analysts, investors and other outside parties
- Leverage prior experience with market leading companies to mentor and develop Katalon's R&D and Development teams

Katalon CTO Requirements

- Prior experience as a CTO of a B2B SaaS company in the Development Tools space with teams of 50+ resources
- Have the expertise to have a broader view on Katalon's technology strategy and the capability and willingness to dive into technical details
- Have significant hands-on experience with Machine Learning and Artificial Intelligence
- Prior experience and comfort in working with globally distributed teams
- Experience being the technical voice of a SaaS company
- Be comfortable with a flexible schedule in order to work most effectively with global teams
- Have a passion for inspiring and mentoring engineers and building great teams
